Hermite normal form works in a strange way for row-style matrix inputs

Bug Report:

SymPy's Hermite normal form behavior is confusing for users who expect the row-style HNF commonly returned by MATLAB or SageMath.

Reproduction Code:

```
from sympy import Matrix
from sympy.matrices.normalforms import hermite_normal_form

A = Matrix([[12, 19, 28, 34], [19, 30, 44, 53]])
result = hermite_normal_form(A)
print(result)

# Expected row-style:
# Matrix([[1, 0, -4, -13], [0, 1, 4, 10]])
```

Expected Behavior:

Row-style HNF should be directly supported or clearly documented.

Requirements:

1. Reproduce the current HNF behavior
2. Confirm row-style vs column-style distinction
3. Add a row-style option or improve documentation
4. Ensure backward compatibility
5. Update tests and documentation
