Bug Report: Matrix Derivative of Determinant

Problem:

SymPy raises NotImplementedError for derivatives of determinant expressions in scalar contexts.

Reproduction:

```
from sympy import MatrixSymbol, Determinant
X = MatrixSymbol('X',3,3)
dX = Determinant(X)
expr = k * dX
expr.diff(X) # NotImplementedError
```

Expected:

All cases should return valid matrix expressions using Jacobi's formula.

Requirements:

- Handle scalar multiplication, division, powers
- Existing tests must pass
